

# TOOL GROUP 407

## Axle Strap Technology

Increase Productivity

Innovative Design

Proven Method

### The Bee Line Advantage

*The innovative, durable camber correction tooling that make up the new Tool Group 407 delivers maximum strength, versatility and flexibility while eliminating unnecessary heavy lifting and disassembly when performing camber corrections on heavy duty tractors.*

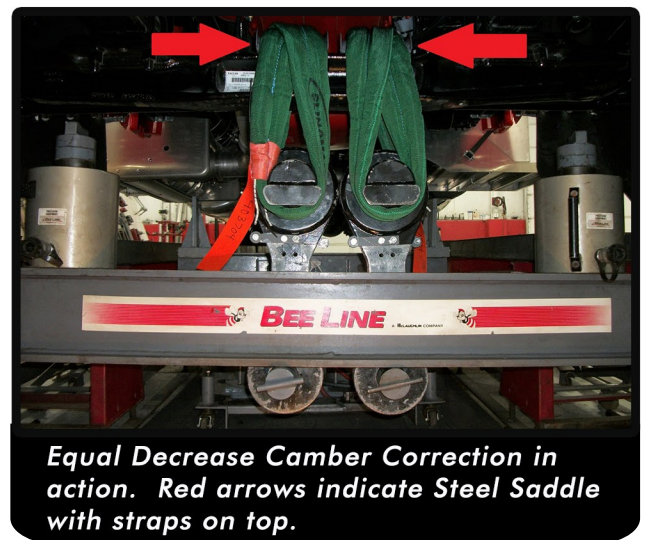

- » Each strap weighs 4 pounds and replaces old style clevises that weigh up to 56 pounds apiece.
- » Straps are flexible and can be placed over the axle in areas with limited clearance without disassembling the steering components.
- » Each strap can handle 100 tons of hydraulic pressure.
- » Tool Group 407 will correct all cast axles from 4,000 lbs. to 14,000 lbs., as well as fabricated hollow axles.
- » The sling tooling group is available as a convenient upgrade to either the 405 or 406 Tool Groups with steel or aluminum rams. The 407U kit was designed to work with your existing tools!

## PLACE YOUR ORDER TODAY - 800-728-7828

The new 407 straps replace heavy clevises and install over the axle with ease.

Equal Decrease Camber Correction in action. Red arrows indicate Steel Saddle with straps on top.
